Topic

### **Developments in the AM Market and how to benefit from them**

Times of crisis are always a time when major changes take place. It is often at such times that the biggest technical innovations happen. Over the last ten years, additive manufacturing has developed into a reliable and serious technology sector. It can bring enormous economic benefits in many areas if the corresponding fields of application can be successfully developed. The presentation will show where we stand technologically and what is needed to leverage economic potential.

### **About the Speaker**

Georg Schöpf is a freelance editor and editor-in-chief of the trade magazine Additive Fertigung. Many years in industrial sales have given him an eye for the needs of industry before he became self-employed with communication topics in adult education. He has been involved with additive manufacturing since 1999, and his background is rounded off by work as a production manager in a manufacturing company. In 2013, he began writing for the specialist publisher x-technik, where he launched the trade magazine Additive Fertigung in 2015.
