Topic

Sustainable Stainless Steel Powder Accelerating a Green Transformation

This presentation highlights the sustainable metal powder that Outokumpu is providing for the additive manufacturing industry. Outokumpu, a global leader in sustainable stainless steel, leverages its expertise to expand solutions with high-performance stainless steel powder. With the vacuum induction melting inert gas atomization (VIGA) plant in Krefeld, Germany, Outokumpu offers various specialized stainless steel powders along with other metal powders, produced from its own recycled materials.

About the Speaker

Dr. Xuan Yang is an R&D engineer based at Outokumpu's Krefeld R&D Center in Germany. Her work focuses on sustainable and specialized stainless steel powder, as well as other metal powder, for various industrial applications.
